bio

I'm a software developer. Young me discovered programming as a means to make computers do my bidding. My main expertise is web development, mostly on the frontend side of things. I'm interested in science, physics, astronomy, technology. I try to entertain other analog hobbies like cooking, gardening and cycling. I like to take things apart - I find great pleasure in occasionally putting them back together. This CV has been generated from my C.V. in JSON into a human friendly format.
